Environmental Protection Specialist

On March 23, 1977, a conference was held with Mr. Kenneth H. Gibson, President, to determine steps his company has taken to eliminate mass emission and opacity problems at the furnace operation. Mr. Gibson has been trying to get a small business loan to purchase control equipment but thus far he has been unsuccessful. However, he now plans to go ahead and purchase an Airco control device on one of the furnaces as an experimental unit. If it is successful in controlling emissions on that furnace, units will be purchased for all furnaces. The Department will be notified when the unit is installed which shouldn't be more than sixty (60) days. Applications for plan approval will be sent to the company.
